

# Tim Baker Trail

## Species Identification Guide

There are two distinct biomes along the Trail:

- Muskeg (M), defined by a swamp or bog consisting of a mixture of water and partly dead vegetation frequently covered by sphagnum or other mosses. There is also tussock meadow and woody vegetation which includes spruce trees.
- Beech-Maple Forest(B), This area is designated by coniferous trees. There is also an area called tussock which is defined by clumps of growing grasses.

		
<p style="text-align: center;">Moosewood (M) <i>Acer Pensylvanicum</i></p>	<p style="text-align: center;">Field Horsetail (M) <i>Equisturn Arvense</i></p>	<p style="text-align: center;">Cinnamon Fern (M, B) <i>Osmunda Cinnamomea</i></p>
		
<p style="text-align: center;">Dog Tooth Lichen (M, B) <i>Peltigera Canina</i></p>	<p style="text-align: center;">Pixie Cup Lichens (M) <i>Cladonia</i></p>	<p style="text-align: center;">Shield Ferns (M) <i>Dryopteris</i></p>
		
<p style="text-align: center;">Marsh Fern (M) <i>Thelypteris Palustris</i></p>	<p style="text-align: center;">Black Spruce (M) <i>Picea Mariana</i></p>	<p style="text-align: center;">Sensitive Fern (M) <i>Onoclea Sensibilis</i></p>

 <p>Balsam Fir (M) <i>Abies Balsamea</i></p>	 <p>Northern White Cedar (M) <i>Thuja Occidentalis</i></p>	 <p>Broom Moss (M, B) <i>Dicranum Scoparium</i></p>
 <p>Leafy Liverwort (M) <i>Bazzania Trilobata</i></p>	 <p>Thallose Liverwort (M) <i>Pellia Epiphylla</i></p>	 <p>Helleborine Orchid (M) <i>Epipactis Helleborine</i></p>
 <p>Peat Moss (M) <i>Sphagnum Squarrosum</i></p>	 <p>Marsh Bulrush (M) <i>S. Cyperinus</i></p>	 <p>Sedge (M) <i>Cyperus</i></p>
 <p>Northern Willowherb (M) <i>Epilobium Glandulosum</i></p>	 <p>Red Maple (B) <i>Acer Rubrum</i></p>	 <p>Sugar Maple (B) <i>A. Saccharinum</i></p>
 <p>Beech (B) <i>Fagus Sylvatica</i></p>	 <p>Hobblebush (B) <i>Viburnum Lantanoides</i></p>	 <p>Hair Cap Moss (B) <i>Polytrichum Juniperinum</i></p>
